

(Currently Amended) A method for calculating a level of detail (LOD) value
for use during computer graphics processing, comprising:
identifying a plurality of geometrically arranged coordinates;
computing a distance value based on the geometrically arranged coordinates;
and

calculating a LOD value using the distance value for use during computer graphics processing; and

estimating a derivative value based on the geometrically arranged ecordinates, wherein the distance value is computed based on thea derivative value; wherein the geometrically arranged coordinates include (z₀, z₁, z₂, z₃) which are representative of a quadrilateral;

wherein the derivative value is calculated using the expression $((z_1 . z_0) + (z_3 . z_2))/2$.

- 3. (Currently Amended) The method as recited in claim 2, wherein the geometrically arranged coordinates include (z₀, z₁, z₂, z₃) which are representative of a quadrilateral with z₀ being an upper left corner of the quadrilateral, z₁ being an upper right corner of the quadrilateral, z₂ being a lower left corner of the quadrilateral, z₃ being a lower right corner of the quadrilateral.
- 4. (Original) The method as recited in claim 3, wherein the quadrilateral is a 2x2 pixel quadrilateral.
- (Cancelled)
- 6. (Original) The method as recited in claim 3, wherein the derivative value is a derivative with respect to an x-axis.

7. (Currently Amended) The method as recited in claim 6, A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

identifying a plurality of geometrically arranged coordinates;

computing a distance value based on the geometrically arranged coordinates;

calculating a LOD value using the distance value for use during computer graphics processing; and

estimating a derivative value based on the geometrically arranged coordinates, wherein the distance value is computed based on the derivative value;

wherein the geometrically arranged coordinates include (z_0, z_1, z_2, z_3) which are representative of a quadrilateral with z_0 being an upper left corner of the quadrilateral, z_1 being an upper right corner of the quadrilateral, z_2 being a lower left corner of the quadrilateral, z_3 being a lower right corner of the quadrilateral;

wherein the derivative value is a derivative with respect to an x-axis; wherein the derivative value is calculated using the expression $((z_1 \, z_0) + (z_3 \, z_2))/2$.

8. (Cancelled)

9. (Currently Amended) The method as recited in claim 8, A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

identifying a plurality of geometrically arranged coordinates;

computing a distance value based on the geometrically arranged coordinates;

calculating a LOD value using the distance value for use during computer graphics processing; and

estimating a derivative value based on the geometrically arranged coordinates, wherein the distance value is computed based on the derivative value; wherein the geometrically arranged coordinates include (z_0, z_1, z_2, z_3) which are representative of a quadrilateral with z_0 being an upper left corner of the quadrilateral, z_1 being an upper right corner of the quadrilateral, z_2 being a lower left corner of the quadrilateral, z_3 being a lower right corner of the quadrilateral; wherein the derivative value is a derivative with respect to an y-axis;

wherein derivative value is calculated using the expression $((z_2 \, . \, z_0) + (z_3 \, . \, z_1))/2$.

- 10. (Cancelled)
- 11. (Cancelled)
- 12. (Cancelled)
- 13. (Currently Amended) The method as recited in claim-2, A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

 identifying a plurality of geometrically arranged coordinates;
 computing a distance value based on the geometrically arranged coordinates;
 calculating a LOD value using the distance value for use during computer

graphics processing; and

estimating a derivative value based on the geometrically arranged coordinates, wherein the distance value is computed based on the derivative value; wherein the LOD value is calculated for dependent textures.

14. (Previously Amended) A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising: identifying a plurality of geometrically arranged coordinates; computing a distance value based on the geometrically arranged coordinates; and

calculating a LOD value using the distance value for use during computer graphics processing;

wherein the LOD value is calculated for cube environment mapping.

15. (Previously Amended) A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising: identifying a plurality of geometrically arranged coordinates; computing a distance value based on the geometrically arranged coordinates;

calculating a LOD value using the distance value for use during computer graphics processing;

determining if the geometrically arranged coordinates reside on separate sides of a cube map; and

performing a coordinate space transform if the geometrically arranged coordinates reside on separate sides of the cube map.

16. (Previously Amended) A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising: identifying a plurality of geometrically arranged coordinates; computing a distance value based on the geometrically arranged coordinates; calculating a LOD value using the distance value for use during computer graphics processing; and

determining if a sign of a q-value of a pixel associated with each coordinate is the same.

- 17. (Original) The method as recited in claim 16, and further comprising setting the LOD value to infinity if it is determined that the sign of the q-value of each pixel is not the same.
- 18. (Currently Amended) A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising: identifying a plurality of geometrically arranged coordinates; computing a distance value based on the geometrically arranged coordinates; and

calculating a LOD value using the distance value for use during computer graphics processing; and

transforming the geometrically arranged coordinates to a different coordinate system (l,m,n), wherein the distance value is estimated using an expression selected from the group of $(l_1-l_0)^2+(m_1-m_0)^2+(n_1-n_0)^2, (l_2-l_0)^2+(m_2-m_0)^2+(n_2-n_0)^2$, $(l_3-l_1)^2+(m_3-m_1)^2+(n_3-n_1)^2$, and $(l_3-l_2)^2+(m_3-m_2)^2+(n_3-n_2)^2$ wherein the geometrically arranged coordinates include (z_0,z_1,z_2,z_3) which are representative of a quadrilateral with z_0 being an upper left corner of the quadrilateral, z_1 being an

-6-

upper right-corner of the quadrilateral, z2 being a lower left-corner of the quadrilateral, z₃-being a lower right corner-of-the-quadrilateral.

19. (Currently Amended) The method as recited in claim 18, and further comprising A method for calculating a level of detail (LOD) value for use during computer graphics processing, comprising: identifying a plurality of geometrically arranged coordinates; computing a distance value based on the geometrically arranged coordinates; calculating a LOD value using the distance value for use during computer graphics processing; and

transforming the geometrically arranged coordinates to a different coordinate system (l,m,n), wherein the distance value is estimated using an expression selected from the group of $(l_1 - l_0)^2 + (m_1 - m_0)^2 + (n_1 - n_0)^2$, $(l_2 - l_0)^2 + (m_2 - m_0)^2 + (n_2 - n_0)^2$ $(l_3-l_1)^2+(m_3-m_1)^2+(n_3-n_1)^2$, and $(l_3-l_2)^2+(m_3-m_2)^2+(n_3-n_2)^2$;

wherein the geometrically arranged coordinates include (z₀, z₁, z₂, z₃) which are representative of a quadrilateral with z₀ being an upper left corner of the quadrilateral, z₁ being an upper right corner of the quadrilateral, z₂ being a lower left corner of the quadrilateral, z3 being a lower right corner of the quadrilateral.

- 20. (Cancelled)
- 21. (Cancelled)
- 22. (Cancelled)
- (Cancelled) 23.
- 24. (Cancelled)
- 25. (Currently Amended) The computer program as recited in claim 24, A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

-7-

a code segment for identifying a plurality of geometrically arranged coordinates;

a code segment for computing a distance value based on the geometrically arranged coordinates;

a code segment for calculating a LOD value using the distance value for use during computer graphics processing; and

a code segment for estimating a derivative value based on the geometrically arranged coordinates, wherein the distance value is computed based on the derivative value;

wherein the geometrically arranged coordinates include (z_0, z_1, z_2, z_3) which are representative of a quadrilateral with z_0 being an upper left corner of the quadrilateral, z_1 being an upper right corner of the quadrilateral, z_2 being a lower left corner of the quadrilateral, z_3 being a lower right corner of the quadrilateral;

wherein the derivative value is a derivative with respect to an x-axis; wherein the derivative value is calculated using the expression $((z_1 \cdot z_0) + (z_3 \cdot z_2))/2$.

26. (Cancelled)

27. (Currently Amended) The computer program as recited in claim 26, A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

a code segment for identifying a plurality of geometrically arranged coordinates:

a code segment for computing a distance value based on the geometrically arranged coordinates;

a code segment for calculating a LOD value using the distance value for use during computer graphics processing; and

a code segment for estimating a derivative value based on the geometrically arranged coordinates, wherein the distance value is computed based on the derivative value;

-8-

wherein the geometrically arranged coordinates include (z_0, z_1, z_2, z_3) which are representative of a quadrilateral with zo being an upper left corner of the quadrilateral, z₁ being an upper right corner of the quadrilateral, z₂ being a lower left corner of the quadrilateral, z₃ being a lower right corner of the quadrilateral;

wherein the derivative value is a derivative with respect to an y-axis; wherein derivative value is calculated using the expression $((z_2, z_0) + (z_3, z_0))$

 $z_1))/2.$

- 28. (Cancelled)
- 29. (Cancelled)
- (Cancelled) 30.
- 31. (Previously Amended) A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:
- a code segment for identifying a plurality of geometrically arranged coordinates;
- a code segment for computing a distance value based on the geometrically arranged coordinates; and
- a code segment for calculating a LOD value using the distance value for use during computer graphics processing;
 - wherein the LOD value is calculated for dependent textures.
- 32. (Previously Amended) A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:
- a code segment for identifying a plurality of geometrically arranged coordinates;
- a code segment for computing a distance value based on the geometrically arranged coordinates; and

a code segment for calculating a LOD value using the distance value for use during computer graphics processing;

wherein the LOD value is calculated for cube environment mapping.

33. (Previously Amended) A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

a code segment for identifying a plurality of geometrically arranged coordinates;

a code segment for computing a distance value based on the geometrically arranged coordinates;

a code segment for calculating a LOD value using the distance value for use during computer graphics processing;

a code segment for determining if the geometrically arranged coordinates reside on separate sides of a cube map; and

a code segment for performing a coordinate space transform if the geometrically arranged coordinates reside on separate sides of the cube map.

34. (Previously Amended) A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

a code segment for identifying a plurality of geometrically arranged coordinates;

a code segment for computing a distance value based on the geometrically arranged coordinates;

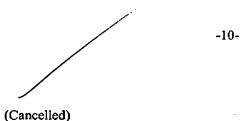

a code segment for calculating a LOD value using the distance value for use during computer graphics processing; and

a code segment for determining if a sign of a q-value of a pixel associated with each coordinate is the same.

35. (Original) The computer program as recited in claim 34, and further comprising a code segment for setting the LOD value to infinity if it is determined that the sign of the q-value of each pixel is not the same.

36.

37. (Currently Amended) The computer program as recited in claim 36, and further comprising A computer program embodied on a computer readable medium for calculating a level of detail (LOD) value for use during computer graphics processing, comprising:

a code segment for identifying a plurality of geometrically arranged coordinates;

a code segment for computing a distance value based on the geometrically arranged coordinates;

a code segment for calculating a LOD value using the distance value for use during computer graphics processing; and

a code segment for transforming the geometrically arranged coordinates to a different coordinate system (l,m,n), wherein the distance value is estimated using an expression selected from the group of $(l_1 - l_0)^2 + (m_1 - m_0)^2 + (n_1 - n_0)^2$, $(l_2 - l_0)^2 + (m_2 - m_0)^2 + (n_2 - n_0)^2$, $(l_3 - l_1)^2 + (m_3 - m_1)^2 + (n_3 - n_1)^2$, and $(l_3 - l_2)^2 + (m_3 - m_2)^2 + (n_3 - n_2)^2$.

wherein the geometrically arranged coordinates include (z_0, z_1, z_2, z_3) which are representative of a quadrilateral with z_0 being an upper left corner of the quadrilateral, z_1 being an upper right corner of the quadrilateral, z_2 being a lower left corner of the quadrilateral, z_3 being a lower right corner of the quadrilateral.

38. (Cancelled)
